

# Wubamlak Girus

Software Engineer

## Professional Summary

I am a 4th-year student with a strong interest in problem-solving and self-learning. I have completed various Udemy courses, including Jonas's and Angela Yu's Full Stack course. I am actively working on personal projects to enhance my experience, specially in Node.js and React.

## Education

### Bahir Dar University

2022 - 2026

Bachelor's Degree in Software Engineering

## Projects

### Project Management System

#### Sole Developer

This project management system supports adding projects, breaking them into tasks, assigning tasks to team members with email notifications, and tracking progress and deadlines. To test as a project manager you can use these credential.

### Gbi Gubae Family Distributed System

#### Sole Developer

This application is designed for Gibi Gubaea and is used exclusively by admin and super admin users. Its primary function is to manage the distribution of Gibi Gubae members into families. The distribution can be done automatically by the system or manually by an admin.

### Record Patient Data and Download It as an Excel File

#### Sole Developer

This web application is designed for doctors to efficiently record patient data in real-time during treatment. Should a doctor need to generate a report on the number and details of patients treated within a month, the application allows them to download the recorded patient data as an Excel file for submission to their supervisor.
